MOVING BOUNDARIES
HUMAN SCIENCES AND THE FUTURE OF ARCHITECTURE

SUMMER COURSE 2022

This summer course offers an intensive two-week program encouraging the intersection between disciplines, from architecture and the built environment to scientific disciplines concerned with the human perception and behavior.

Sited in the landscapes of Galicia and Northern Portugal, the course draws from the Pilgrimage traditions of this region.

“A pilgrimage is a journey, often into an unknown or foreign place, where a person goes in search of new or expanded meaning about their self, others, nature, or a higher good, through the experience. It can lead to a personal transformation, after which the pilgrim returns to their daily life.”

The course is open to architects, urban designers, interior and product designers, historians, health and environmental experts, cognitive scientists, neuroscientists, psychologists, anthropologists, educators, as well as graduate and postdoctoral students in these fields.

Tatiana Berger
Architect, Professor: Sergei Gepshtlein
Scientist, Professor
